

PJ Technologies Inc. Unveils WMIX Remote Administration Product

WMIX is the first GUI-based implementation of WMI technology that provides flexibility with no scripting or programming necessary.

Miami, FL (PRWEB) April 6, 2005 – PJ Technologies announces the launch of WMIX (Windows Management Instrumentation eXplorer) remote administration product, the easiest and most powerful way to access WMI's management features and to explore WMI's information repository.

Windows Management Instrumentation (WMI) is an exciting and powerful technology used to control and manage virtually every component on a remote Windows machine. However, WMI can only be used through programming or scripting. Even for system administrators who have an intimate knowledge of scripting, initially exploring the dense WMI information repository can be a daunting task.

Designed to provide unrestricted access to WMI through an intuitive and easy-to-use graphical user interface, WMIX is for both system administrators with WMI scripting knowledge and system administrators who have never used WMI before. WMIX provides access to virtually every piece of information available on a machine, from the most basic objects such as processes and operating system, to the most advanced objects such as the settings of the temperature probes on the motherboard.

WMIX can be used by WMI developers to explore the WMI information repository, search for WMI objects, and organize WMI classes and queries in ways never offered before. And it can be used by system administrators to remotely administer their machines to the same extent as they would by using WMI scripting. WMIX includes extensive reporting features to generate customized asset management reports.

WMIX is meant to be a "companion" tool and is priced accordingly at \$69 per user license with no additional client fee.

About PJ Technologies Inc.

PJ Technologies is a privately held company founded in 1998 and specializing in Microsoft Windows NT®/Active Directory system management software for the enterprise. More information and screenshots of WMIX can be found at <http://wmix.pjtec.com>
